Professional Profile

Information systems and business analytics graduate pursuing a Professional Master's of Information Systems with a concentration in Emerging Technologies. Healthcare analytics experience spans clinic reporting, year-over-year comparisons, Excel automation, and HIPAA-aware AI workflow design. Academic work includes data warehousing, predictive analytics, systems analysis, and AI-assisted analytical applications. Seeking full-time opportunities in data analytics, business intelligence, business systems, and emerging technology.

Education

University of Arkansas | Sam M. Walton College of Business

Fayetteville, Arkansas

Professional Master's of Information Systems | Fall 2025 - Expected May 2027

Concentration: Emerging Technologies

Bachelor of Science in Business Administration | Awarded May 2025

Major: Information Systems - Business Analytics | Minor: Finance

Professional Experience

Rise Physical Therapy | Data Analyst Intern

Fayetteville, Arkansas | April 2025 - Present

- Analyze clinic reports and trends in scheduling, clinical efficiency, and patient outcomes to support operational recommendations.
- Develop clinic and team dashboards, comparative and year-over-year reports, and tracking tools that support the Director of Operations in monitoring performance.
- Automate manual Excel reporting, conduct market research, and develop AI-assisted reporting workflows with validation and reconciliation checks.
- Incorporate HIPAA privacy and security considerations into AI workflow design by using synthetic development data, limiting unnecessary patient fields, and documenting approved-environment and access requirements.
- Document data-flow boundaries and the need to verify applicable business associate agreements before PHI enters external AI, hosting, or storage services.

University Recreation | Student Manager and Facility Supervisor

University of Arkansas, Fayetteville | October 2021 - February 2026

- Supervised student staff across recreation facilities and coordinated daily service for members, faculty, and staff.
- Coordinated equipment reservations, external-event requests, and special-event equipment needs across UREC programs.
- Served as a communication contact during emergency procedures and managed injury, illness, and incident response.

Jackson Jessup

Additional Professional Experience

Natural State Health Center and TruBalance | Business Operations Intern

Little Rock, Arkansas | May 2021 - August 2022

- Organized digital information and completed administrative tasks while protecting confidential patient information.
- Scheduled visits across chiropractic, nursing, physical therapy, and dietary services; processed transactions and supported patient-facing operations.
- Covered the front desk for one month during hiring and during staff leave; contributed feedback in daily team meetings.
- Assisted with marketing mailouts and coordinated communication among patients and staff.

Dairy Queen Grill and Chill | Chill Team Leader

Benton, Arkansas | April 2019 - August 2021

- Assigned tasks, managed inventory, and supervised the Chill area while coordinating communication between coworkers and management.
- Maintained service-area cleanliness and supported a cooperative work environment.

Leadership

University Recreation Student Employee Advisory Board | Chair

University of Arkansas | Chair: May 2024 - May 2025 | Member since April 2023

- Represented student staff in discussions with UREC administrative leadership and advocated for staff and participant needs.
- Led board meetings and strategic planning, including tie-breaking decisions when needed.
- Supported event planning, staff initiatives, and leadership development for student employees and board members.

University Recreation Hiring Committee

March 2023

- Reviewed resumes, interviewed applicants, and assisted with hiring-fair setup and logistics.

Technical and Business Skills

Data and reporting: SQL, SQL Server, Excel, Power BI, Tableau; data preparation, dimensional modeling, data dictionaries, comparative reporting, and dashboard communication.

Programming and tools: Python, C#, GitHub; AI-assisted development and analytical workflows using ChatGPT and Claude. Flask application experience through an AI-assisted academic project.

Academic analytical methods: regression, decision trees, k-nearest neighbors, classification model comparison, ANOVA, correlation, and validation of analytical outputs.

Business practice: HIPAA-aware data handling and AI workflow planning, requirements documentation, use cases, process analysis, stakeholder communication, project coordination, team leadership, and customer service.

Recognition and Training

Student Manager of the Term, Spring 2024 | Facility Supervisor of the Term, Spring 2023

Outlook Essential Training (Microsoft 365), LinkedIn Learning, April 2023

Jackson Jessup

Analytics and AI Projects

DFW MedAI | Healthcare Analytics Assistant

Graduate team project | Managing AI Projects | 2026 | AI-assisted development

- Contributed to an inpatient analytics project using a prepared dataset of 322,574 encounters and 41 fields, with facility, diagnosis, geographic, and benchmark context.
- Used an AI-assisted development workflow to create a local Flask application with a Claude API connection, natural-language analysis, Python code execution, chart output, and interaction logging.
- Worked with a data dictionary, clinical terminology references, and metric definitions to distinguish observed average length of stay from arithmetic and geometric benchmarks.
- Participated in documented user testing of the visualization version; project records distinguish user testing from assistant-run checks and preserve limitations on unsupported questions such as readmission rates.
- The project includes a ChatGPT adaptation package with partitioned knowledge files, analytical reference material, pivot workbooks, and an evaluation suite.

Arkansas Housing Market | Data Warehouse and BI Analysis

Academic team project | SQL Server, Python, Power BI

- Collaborated on a county-level data warehouse combining property, crime, population, and economic information for 2020-2023.
- The team loaded a Census API source through Python and 15 CSV inputs, organizing the model around four fact tables with shared county and date dimensions.
- Documented an individual investigation comparing year-over-year crime changes with average home sale-price changes across Arkansas counties.
- Addressed differences in source-data grain and incomplete crime reporting when interpreting relationships and presenting county comparisons.

Hog Heaven Membership | Predictive Analytics

Academic team project | Regression and classification

- Compared linear regression, decision tree, and k-nearest-neighbor approaches in a team study of customer membership interest.
- Applied preprocessing approaches including missing-value treatment, standardization, and removal of redundant online, in-store, and total variables.
- Reframed an ordinal survey score as a binary likely-to-purchase target and compared advanced models using classification errors.
- Translated model findings into proposed outreach and customer-retention recommendations; results represented coursework predictions rather than realized sales.

Jackson Jessup

Systems and Business Projects

Phill Moore's Construction | Project Management System Analysis

Individual academic project | ISYS 3293 | 2024

- Produced a project charter, scope, feasibility assessment, cost-benefit analysis, and schedule for a proposed centralized project-management system.
- Specified requirements for employee time tracking, project financials, customer communication, and integration with existing HR and financial systems.
- Defined use cases, role-based CRUD permissions, exception conditions, and activity diagrams; prepared a GUI walkthrough covering time entry, cost assignment, and invoice handling.
- Evaluated implementation approaches and documented an implementation recommendation as part of the systems proposal.

NFL Draft and Contract Data | Sports Analytics

Academic team project | Tableau workbook and analytical presentation

- Collaborated on an analysis of draft position, playing position, guaranteed contract amounts, and games played using NFL draft data spanning 2011-2022.
- Used ANOVA, correlation, frequency analysis, and visual comparisons to investigate differences across draft rounds, teams, and positions.
- Presented findings for player, team, and agent decision contexts while considering the limits of observational comparisons.

ArcBest Digital Billing | Innovation and Adoption Case Study

Graduate team presentation | 2026

- Co-developed an interview-based case study of OCR, machine learning, and human review in a freight-billing workflow.
- Analyzed stakeholder ownership, undocumented employee knowledge, controlled rollout, validation, and barriers to workforce adoption.
- Applied the Technology Acceptance Model and Diffusion of Innovations to explain adoption challenges and derive management recommendations.

AI Ethics and Blockchain | Emerging Technology Research

Individual academic coursework

- Designed a policy-oriented prompt and compared AI-tool responses on ethical issues including bias, privacy, transparency, and governance.
- Researched proof-of-stake and proof-of-work tradeoffs in a blockchain term paper, focusing on implementation risks and adoption challenges.
